Introduction

The Model 4906AB is a six-detector instrument designed to survey the hands and shoes of personnel for alpha and beta contamination. Low cost, industrial-duty, and ease-of-use makes the monitoring process easier. Potential contamination and system status is indicated on a large color LCD. Alarms are annunciated locally and can be augmented with optional relays for signaling remote devices or a high-visibility light stack mounted on the top of the instrument. The built-in Ethernet interface supports connection to a network for gathering all count cycles along with permitting remote monitoring of the status of the instrument.

Optical switches activate the counting from six gas flow proportional type detectors. Customizable audio files can provide the user with voice prompts or site-specific instructions thereby making the instrument adaptable. The optional light stack uses a three-tier pattern (green – OK, yellow – failure, red – contamination alarm) to contribute to ease of use.
